(54) Title: IDENTIFICATION DEVICE COMPRISING A TRANSPONDER INTEGRATED INTO A MOBILE TELEPHONE

(57) Abstract: An identification device comprising a transponder (2) that can be read by means of a transmitter/receiver unit (11) arranged to transmit an enquiry signal (13) to the transponder, where the transponder is arranged to reflect (14) the enquiry signal and in this way to modulate the enquiry signal with information stored in a memory in the transponder and where the transmitter/receiver unit (11) is arranged to receive the modulated enquiry signal, which transponder (2) is integrated into a mobile telephone (8) and which transponder (2) is connected to a source (6) of power. The invention is characterised in that the said source (6) of power is constituted by the source of power of the mobile telephone used to power the clock of the mobile telephone (8).
